EDUCATION

Indian Institute of Information Technology Ranchi	2028
<i>B.Tech in Computer Science and Engineering</i>	CGPA : 8.00

TECHNICAL SKILLS

Languages: C, Python, JavaScript, TypeScript
Frontend: React, Next.js, Vite, Tailwind CSS, GSAP
Backend: Node.js, Express.js, REST API Design, WebRTC, Socket.io
Databases: MongoDB, MySQL, PostgreSQL, Prisma, Redis
AI / APIs: Gemini AI (LLM integration)
Auth & Deployment: Clerk, Vercel, Railway
Developer Tools: VS Code, Cursor, Git, GitHub
Coursework: Data Structures and Algorithms, Theory of Computation, Computer Organization and Architecture

PERSONAL PROJECTS

MetaRuntime — Metadata-Driven Full-Stack App Runtime	2026
<i>Tools: Next.js, Express.js, Node.js, PostgreSQL, Prisma, Redis, TypeScript, Tailwind CSS</i>	

- Built a **metadata-driven runtime platform** that converts a single JSON config into a fully working application — auto-generating **PostgreSQL schemas, CRUD REST APIs, and React UI** at runtime with zero additional code.
- Engineered a **workflow engine** with trigger-action execution (`on_create`, `on_update`), a **Bull/Redis** async notification queue, and **JWT-based role access control** applied to all generated routes.
- Designed a **resilient config parser** that validates, repairs, and applies safe defaults to malformed input — keeping the app operational even with incomplete or inconsistent configurations.

AIInvoice — AI-Powered SaaS Invoicing Platform	May 2026
<i>Tools: React, Vite, Express.js, Node.js, MongoDB, Gemini AI, Clerk, Vercel</i>	

- Built a **production-grade, full-stack SaaS platform** that generates professional invoices from plain English descriptions using a **Gemini AI** pipeline — reducing creation time to under 30 seconds.
- Architected a **multi-tenant MongoDB data model** with real-time invoice tracking, open/read receipts, overdue alerts, and smart client management; deployed live on **Vercel** with **Clerk** auth.

K72	Nov 2025
<i>Tools: React, Vite, GSAP, Tailwind CSS</i>	

- Developed a responsive, animation-heavy frontend using **GSAP** scroll-triggered transitions; focused on performance optimization and pixel-perfect component architecture.

ACHIEVEMENTS

CodeX — Collaborative Developer Platform	Open Source Contribution	Quasar x AI Hackathon, IIIT Ranchi
– Tools: WebRTC, Socket.io, Node.js, React – Contributed real-time audio/video calling by implementing WebRTC peer-to-peer connections with ICE candidate negotiation and Socket.io signaling — enabling seamless in-platform developer collaboration.
